SUMMARY

Full-stack developer with professional experience across the complete product lifecycle. From architecture and development through to deployment and team coordination. Has shipped production applications, led developer onboarding, and contributed to products presented at international tech events. Focused on building robust web applications and products using modern web technology stacks.

EDUCATION

GEMS Founders School - Al Barsha

Aug 2022 — July 2026

A-Levels (GCE/IAL)

Dubai, UAE

- **Achieved:** A* in Mathematics, A in AS Physics, A in AS Further Mathematics
- **Predicted:** A* in Further Mathematics, A in Computer Science, A in Physics
- **Subjects:** Mathematics, Further Mathematics, Computer Science, Physics

GEMS Founders School - Al Barsha

Aug 2020 — June 2024

GCSE / iGCSE

Dubai, UAE

- **Achieved:** 999988877 (A*A*A*A*A*A*AA)
- **Subjects:** Mathematics, Further Pure Mathematics, Computer Science, Physics, Chemistry, Psychology, Business Studies, and English Literature/Language

WORK AND VOLUNTEERING EXPERIENCE

Junior Engineering Associate — Full-Stack Web Developer

Oct 2025 — Apr 2026

VOXA (voxa.club)

Dubai, UAE (Remote)

- Refactored the Voxa MVP codebase into production-ready version 1.0, modernizing architecture with redefined user stories and responsive design.
- Co-developed investor-facing Demo app deployed at Lisbon WebSummit 2025 using React (Vite) and Node.js; responsible for version control and deployment workflow.
- Optimized UX and UI design alongside colleagues, providing assistance and insight with Figma designs to reduce navigation friction.
- Implemented Firebase Functions + App Check to automatically flag and remove 100% of harmful community content using AI-based moderation in the MVP.
- Reworked Google Analytics integrations, enabling more precise tracking of user-interaction data for data-driven UX iterations.
- Assisted in onboarding 10+ developer interns: authored a 15+ page developer wiki, provided code reviews, and enforced Git workflow standards.
- Migration Lead: transitioned v1.0 authentication and data layer from Firebase to Supabase (PostgreSQL) to reduce technical debt and improve schema scalability.

Product and App Development Intern

July 2025

VOXA (voxa.club)

Dubai, UAE (Remote)

- Developed a full-stack voice training app using Next.js and Firebase with 5+ core features.
- Integrated AssemblyAI for live audio transcription and OpenAI GPT for automated speech feedback.
- Implemented user authentication and data persistence using Firebase Auth, Firestore DB, and Firebase Storage.
- Managed GitHub repository and led deployment via Vercel.
- Conducted user testing with 30+ external testers to gather feedback for iterative improvements.

GCSE Computer Science Intervention Volunteer Tutor

Sept 2024 — Apr 2025

GEMS Founders School - Al Barsha

Dubai, UAE

- Co-taught twice-weekly GCSE Intervention sessions alongside the Head of Computer Science for Year 11 and Year 12 students.
- Marked mock programming, algorithms, and theory examinations; directly contributed to improved student grades and increased A-Level CS enrollment.
- Awarded Certificate of Appreciation in Computer Science — sole Year 12 recipient in the cohort.

- Led a 5-person team executing an end-to-end digital rebranding strategy and web prototype.
- Applied user-centric UI/UX principles to build interface wireframes, pitching final deliverables to mock corporate stakeholders.

ENGINEERING PROJECTS

Full-Stack Developer, FormulaMetric (formulametric.com)

May 2025 — Present

- Designed full-stack F1 analytics platform using React, Node.js, Express, and MySQL with normalized schema, foreign keys, and indexed lookups.
- Created RESTful API with season, driver, and race filters, including pagination and query parameters.
- Implemented data ingestion from the Jolpica API with a recursive exponential backoff retry algorithm to handle rate limits.
- Built regression, correlation, and sigmoid-based performance metrics for multi-season driver comparisons.
- Developed driver and team assignment logic including support for rotating lineups across seasons.
- Utilized a random-pivot recursive Quicksort algorithm to sort drivers by any of the available metric factors.
- Designed a top-k min-heap (binary tree with priority queue operations) to efficiently find the top 3 drivers in a season in linear time.
- Implemented loading and fallback states to ensure smooth UX across data-intensive views.
- Built interactive UI with MUI X gauges, charts, and responsive layouts supporting comparison of up to 3 drivers.

Full-Stack Developer, Voxa Voice App (voxa.club)

July 2025 — Oct 2025

- Built real-time audio streaming pipeline: microphone capture, downsampling, base64 encoding, chunked audio frames, and continuous WebSocket transmission to AssemblyAI.
- Integrated live transcription into React state, handling partial and final segments with smooth UI updates and clean stream termination.
- Implemented Supabase with PostgreSQL for authentication, database, and file storage; rebuilt UI with TailwindCSS and shadcn/ui.
- Managed GitHub repo, Vercel deployments, environment configs, and multi-developer version control workflow.
- Integrated Google Analytics to track user behaviour and feature usage.

Team Leader, Full-Stack Developer, TLSearch — NASA Space Biology Search Engine (tlsearch.org) Jan 2025 — Mar 2025

- Built a semantic search engine for NASA space-biology datasets using vector embeddings and cosine similarity ranking.
- Implemented FastAPI backend computing in-memory similarity scores and returning ranked JSON results.
- Loaded NASA datasets into Python and processed them in-memory for fast retrieval and experimentation.
- Developed Next.js frontend with TailwindCSS and SEO-ready metadata connected to the FastAPI backend.

Developer, Personal Portfolio Website (aayanpathan.com)

Jan 2025 — Present

- Built with React and TypeScript with animated Vanta.js backgrounds, Framer Motion transitions, and EmailJS contact integration.
- Designed all components with TailwindCSS for consistent styling and fast load performance across devices.

SKILLS

- **Languages:** TypeScript, JavaScript, Python, SQL (MySQL, PostgreSQL), HTML, CSS
- **Frameworks & Libraries:** Next.js, React, Node.js, Express.js, FastAPI, TailwindCSS, shadcn/ui, Material UI (MUI)
- **Cloud & Databases:** Supabase, Firebase, MySQL, PostgreSQL, Vercel, Render, Aiven
- **Tools & Methodologies:** Git, GitHub, Agile Sprints, Figma, WebSockets, REST APIs

AWARDS, HONORS AND CERTIFICATES

- Star Associate of the Year — VOXA
- ICSC Bronze Finalist w/honors (top 8% internationally)
- Best Student — Year 12 Computer Science Cohort (2024–2025)
- 2× UKMT Intermediate Mathematical Challenge Bronze
- Claude Code in Action — Anthropic Academy
